

### **.Net Developer (Scott AFB, IL):**

A .NET development team is interested in any candidates who desire to work on an Enterprise portal providing security authentication for DoD customer. Successful skills sets will be to:

- Work with business and technical teams to analyze and convert business requirements into scalable, robust, and flexible designs
- Design and develop reusable software components
- Ensure that both design and implementation meets the company and industry standards and best practices
- Serve as a point of contact for all people with questions related to architecture and development
- Present technical design and approach to various levels of staff
- Conduct and participate in design review sessions
- 3+ years of industry experience
- 1+ years of OOP and OOD with either Java, or C#
- 1+ years of C# and .Net development. Experience with .Net 3.5 and VB.NET is a plus.
- Experienced with creating .NET web services with ASP.NET or Windows Communication Foundation
- Experienced in developing scalable server-based solutions, ASP.Net.
- Experienced in SQL and stored procedures with a major RDBMS (Sybase, MS SQL Server, or Oracle).
- Excellent communication skills, both written and verbal
- Experience with modern software design patterns, coding, and testing techniques
- Ability to multi-task and capable of working with shifting priorities
- Ability to collaborate and communicate with members of other groups; work independently or as a part of a team
- Experience with XML and web services desired.
- Familiarity with WSRP portlet development is a plus.
- Experience with Microsoft Office required.
- Bachelor's degree from an accredited college or university in a computer or engineering field.
- US citizenship required.
- Ability to acquire security clearance required.
- Candidate must be able to acquire Security+ certification within 6 months of employment.
- Local candidates (within reasonable driving distance of Shiloh, IL) preferred.
